ONE-PAGE BRIEF · AIVISEYE

AI on the cameras you already have.

One shared AI engine applies 32 industry rule packs — the pack decides what counts as a violation. Detection → evidence → your team's phone. Measured on your floor.

What you get

- Existing cameras (RTSP/ONVIF) — nothing new to buy; an edge gateway blurs faces at the source.
- Helmets, forklift no-go zones, fire & smoke, perimeter — only on unmistakable evidence.
- Every alert: annotated frame + evidence clip — via WhatsApp, Telegram, email, or HMAC-signed webhook.
- Honest accuracy: shadow-judge A/B before any model pages you; one-tap false-positive marking; weekly digest.
- **PPE pilot: helmet accuracy 76.5% → 98.0%** (fine-tuned on a real site's footage).

Start small, measured

From ₹1,000 per camera per month

- 30-minute call → 2–4 week pilot on 10–20 of your cameras, measured on your footage
- Fixed price agreed before it begins · turn off the tap any time
- Optional supply/install via Namma CCTV Private Limited — same address, single vendor

---

Scan at your site gate

aiviseye.com — one 30-minute call, one measured pilot, one honest price.
